Education

Vellore Institute of Technology

Sep 2022 – Present

Integrated MTech in Data Science

CGPA: 9.02/10

– *Relevant Coursework: Data Structures & Algorithms, Machine Learning, Computer Networks, DBMS, OOPS*

Technical Skills

Languages: Python, Java, SQL

AI/ML: PyTorch, TensorFlow, Scikit-learn, Langchain, LangGraph, Fast API, RAG, Ollama, LLM

Libraries & Tools: Numpy, Pandas, Hugging Face, N8N, Tableau, Power BI, PySpark, Hadoop

Frontend: ReactJs, Bootstrap, HTML, TailwindCSS

Backend: NodeJs, Django, Supabase, MongoDB, REST API, AWS

Experience

Data Scientist Intern

Hyderabad

Indian National Centre for Ocean Information Services

Oct 2025

- Implemented a real-time ML-based dust storm detection pipeline using VIIRS data from NOAA-20, NOAA-21, and Suomi-NPP, achieving ≤ 3 -minute end-to-end latency on a high-performance computing server.
- Designed a custom QGIS-based labeling pipeline and trained Random Forest models for multi-class dust and cloud classification, achieving 95.8% daytime and 94.9% nighttime accuracy.
- Operationalized the system at INCOIS to generate pixel-wise dust density maps and 24-hour plume trajectory forecasting, supporting early-warning advisories for the Indian Navy and maritime operations.

Research Intern

Noida

Spearmint Technologies Pvt. Ltd.

May 2025

- Developed a social media analysis algorithms achieving 88% accuracy to classify content viralities among temporal growth, peak, and decay patterns derived from 10 precursor signals.
- Predicted virality curves with 92% accuracy by fitting 8+ functional models (linear, sigmoid, step) on Twitter and Instagram data using CatBoost and XGBoost.
- Enhanced posting-time prediction to 87% precision within 24 hours by analyzing 100,000+ posts extract at 20-minute intervals using web crawler and confirming sigmoid dynamics with 98% accuracy.

Projects

Cognitive E-KYC | Python, Django, React.js, Tesseract.js, DeepFace, OpenCV

Aug 2025

- Built an AI-combined e-KYC platform integrating Tesseract.js for OCR (92% accuracy) and DeepFace for face verification (96.8% accuracy) to ensure secure identity validation.
- Leveraged Random Forest (98.2% accuracy) and encrypt shared PDF to enhance fraud prevention alongwith authentication reliability.
- Applied 128-bit AES encryption and SHA-256 hashing with PyPDF and Python libraries for secure PDF encryption and sharing, achieving end-to-end latency under 10 seconds, optimized for financial applications.

Well Scan | Python, React.js, Django, SQLite, OpenCV, Scikit-learn, FastAPI, LLM

Jan 2025

- Designed an AI-driven healthcare platform to predict organ-specific conditions and diseases, achieving over 90% accuracy with Random Forest, OpenCV, RNN.
- Integrated a Gemini API-powered chatbot using Python, Django, and OpenCV, delivering 24/7 medical guidance and preventive care recommendations.
- Enhanced user experience by incorporating real-time doctor consultation; this innovation resulted in a 25% reduction in missed appointments and improved overall user engagement with the health dashboard.

Certifications & Achievements

- **Applied Machine Learning in Python – Coursera**
- **Databases for Developers – Oracle**
- **AlgoUniversity Graph Camp(2025)**
- **Solved 500+ DSA problems across coding platforms.**
